

# The Gamut Hi-Fi Lobster Chair

Music lovers, are you sitting comfortably? More than that, does your chair make your music sound better? If you're really serious about sound quality, then you've no doubt spent many hours carefully selecting and fine-tuning every element of your hi-fi system. You've probably also played around with its placement in your room. But what about the furniture you're sitting on?

The Gamut Hi-Fi Lobster Chair is the world's first music listening chair. Its ingeniously-crafted headrest incorporates a special material designed to better reflect sound around your ears. The effect is striking – the soundstage becomes more precise and natural, allowing your music to spring to life in your living room.

## Based on a Danish design classic

Design buffs will recognize the chair's striking shape: the original Lobster Chair is the creation of iconic Danish designers Lund and Paarmann and is manufactured by high-end furniture makers Kvist. In collaboration with Kvist, Gamut developed this unique variation tailored specifically for music lovers. It incorporates special acoustic damping materials, carefully positioned to improve the listening experience – while maintaining the original Lobster Chair's breathtaking beauty and luxurious comfort.

## The little extras

The matching Lobster Footrest is specifically designed for use with the Lobster Chair. Its slightly tilted shape creates the ideal listening position. Just sit back, relax and lose yourself in your music.

The Gamut HI-FI Lobster Chair, designed by Eva Paarmann & Oluf Lund is available to all Gamut, Raidho and Scansonic distributors and dealers.
